## An Exclusive Behind the Scenes Interview with Eric Berger: Weather, Space and Beyond

Thursday, May 20, 2021 | 3 pm

### Speaker Bio

**Eric Berger**  
**Founder/Editor, Space City Weather**  
**Senior Space Editor, Ars Technica**

Eric Berger is the senior space editor at Ars Technica, covering everything from astronomy to private space to wonky NASA policy, and author of the book *Liftoff*, about the rise of SpaceX. Eric has an astronomy degree from the University of Texas and a master's in journalism from the University of Missouri. He previously worked at the Houston Chronicle for 17 years, where the paper was a

Pulitzer Prize finalist in 2009 for his coverage of Hurricane Ike. A certified meteorologist, Eric has written about weather in the Houston area for more than a decade. You may have seen his hurricane coverage in the Houston Chronicle as Eric “SciGuy” Berger, but now he brings that same kind of no-nonsense coverage of weather in and around Houston to the site he founded, Space City Weather. He looks forward to that first fall cool front every year. Eric lives in Houston.
